

Manufactured from high-quality Sri Lankan coconut coir fibre, this matting system is one of our most popular for interior entranceways. Birrus PVC-backed COIR provides excellent performance even in high-traffic areas. The coir itself offers an effective shoe-cleaning surface whilst being durable and easy to clean.

Available in natural honey and black, this matting system will be sized to suit your entranceway design. To ensure the best appearance, we use only the best coconuts, so our coir has the highest quality fibre. This delivers a consistent colour without striping.

All entrance matting from Birrus can be customised to fit any shape and size. Our manufacturing standard lead time is up to 10 working days plus delivery time.

SYSTEM APPLICATIONS

Interior and Well-covered Exterior.

Highly Recommended for:

- Residential Houses
- Apartment Buildings
- Commercial Buildings
- Office & Corporate Buildings
- Shops, Restaurants & Cafés
- Civic Buildings
- Car Parks, Warehouses
- Storage Facilities
- Factories
- Schools & Educational

Recommended For:

- Sports & Big Event Venues

Not Recommended For:

- Public Transport Facilities
- Hospitals & Healthcare Facilities

COIR

Luxury - Quality - Reputation

TECHNICAL SPECIFICATION

GENERAL

- 1-Year warranty
- Slip tested to Australian standards
- Fire tested to Australian standards
- Manufactured from sustainably harvested coir
- 35% natural coir fibre
- Backing - 65% PVC (contains PVC resin, calcium carbonate, DOP & chlorinated paraffin wax)
- Backing minimises shedding and provides the grip required to stop the mat from moving under constant use
- Chemical-resistant backing and edging
- High-performance - removes dirt and moisture from shoes
- Recessed frames can be:
 - Made from aluminium, brass or stainless steel.
 - Fully welded or loose, mitred and drilled for screw-fixing

Note: Coir floor coverings are not produced in robotic factories. They are the products of agriculture, using natural dyes. Minor irregularities in weave are inherent to these products – they do not affect wear. They are not flaws. Colour variations are also common – from roll to roll, from sample to roll and even within roll.

SUSTAINABLE CHOICE

Coir is an effective matting material, sourced from Sri Lanka, which is expertly crafted from sustainably harvested coconut fibres.

Integral to the livelihoods of rural communities, coir production is not just a craft; it's a vital industry, conducted with a deep commitment to environmental stewardship.

Coir has been the choice for matting systems for centuries, renowned for its durability and natural aesthetic. By selecting a Birrus COIR system, you're not only opting for superior design but also supporting sustainable practices that respect both people and the planet.

SYSTEM INSTALLATION

Birrus Installation Service Available - contact us for details.

Ensure that the recess is clean, level and smooth (for gluing in the mat, the recess will need an engineered screed or skim coat to ensure adhesion).

Install angles using glue or mechanical fixings.

Glue in the mat using a contact adhesive or pressure-sensitive glue.

We recommend that the mat be unrolled and allowed to adjust to the climate for 8-24 hours.

CARE & MAINTENANCE

Coir should be vacuumed weekly or daily in high-traffic areas to remove dirt, grit and loose fibres.

NEVER steam clean or use water extraction methods. Direct contact with excessive moisture may cause shrinkage or expansion.
